

11. RAMAZ NAMICHEISHVILI - Professional activity, as systematic knowledge realization

Formation suffers system education from defects of. Holistic structure of formation is presented as an amount of consequent logical pyramids of knowledges of separate educational system phase. Not account of these principles breaks professional training, but effective knowledge power decreases. There is in view of the scholastic program of preparing the bachelors of economy of universities. And others determined that economist simultaneously must be and mathematician and historian and philosopher and psychologist. Hereinafter: than less we shall subject prospecting to subjects, pertain one or another position to the subject of the economic science, so much the better. So we shall, on the measure of our possibilities, take its calculation. From these instructions of fathers of economy follows that scholastic program of preparing the economists must is built on the logical certain discipline system, which has between itself quantitative and qualitative interdependence, i.e. program of preparing the economists, includes three groups of discipline: main, associate and savvy eruditions. For the development of holistic and logikal scholastic program of preparing the bachelors of economy I offer; suggest building of logical pyramid of under study subjects with provision for quantitative-qualitative reason, but for governing scholastic network graph of these subjects.
